Structured cabling system

IT infrastructure Implementation and commissioning

- LAN/ WAN/ VPN Installation and Configuration
- IT Infrastructure Solutions
- Fiber Optic Solutions
- Routing And Switching

Based on profound experience and exquisite technologies, AL AYAAN could provide customers with high-quality and high-performance fiber optic cabling solutions to meet customer's different needs.

We provide the whole set of products including fiber optic cables, cable terminal devices, fiber optic passive components, tool kit, test equipment and professional technical support as well as excellent services.

Access control System Installation and Configuration

Home and Office Smart Automation System

Access control helps keep the office premises safe and under vigilant by preventing intruders, keeping a record for all people who entered and also being able to grant access to the selected ones.

We help you to get the best access control mechanism using the latest technology and help to establish a controlled access to the premises of your office.

CCTV Surveillance

Security Video Surveillance System installation and configuration

CCTV & Surveillance system is composed of camera shooting, display and recording, using optic fiber, coaxial cable or microwave to transmit video signals in its closed loop.

Co-operating with other equipment, like alarms, the system can provide effective security protection and monitoring.

AL AYAAN provides you with the best solutions of CCTV & Surveillance systems to secure your surroundings.

Infrastructure

In Building Solutions

We offers end-to-end Turnkey IBS services for underground metro stations, tunnel coverage, hotels, malls, government offices, airports etc. for extension of mobile services to areas where coverage is not uniform and is affected by dark spots.

Customers expect global coverage at all times and places. However, for a Telecom operator, providing 100% saturated coverage is neither technically feasible nor commercially viable, resulting in "dark spots". Dark spots are areas where mobile signals from external towers are unable to reach, such as inside buildings, basements, lift wells, under-ground/metro tunnels etc. Another situation that arises is a condition when usage is too high to provide network access to all the users.

OUR TECHNICAL SERVICES

Our Technical Services

With a strong vision to give our clients the best products for their Engineering and medical equipment. We have our own team which focuses on client satisfaction by delivering the best in the market according to client needs.

Laboratory/ Workshop Preventive Maintenance

We help with managing preventive maintenance of your equipments with annual maintenance.

Installation & maintenance - Security Systems & Surveillance Cameras

Burglar/fire alarm systems from initial system layout, installation and commissioning, to ongoing technical support and maintenance.

MEP PROJECTS AND MAINTENANCE

A wide range of solutions, we can assess the exact system which is appropriate for your electrical needs.

General Maintenance

We improve your maintenance and repair operations with cost effective solutions.

ROUTINE & SERVICES

Al Ayaan Technical Service Management normally gives the Project In -charge enough authority and qualified teams of Engineers and Technical staff to carry out the execution of the project smoothly and efficiently.

01

Project Overview

Once a work plan has finalized and mutually agreed on, the emphasis of Al Ayaan Technical Service's Management team will shift to Project Control. We consider that Project Control involves five elements necessary for analysis and evaluation, all interrelated and required to monitor and control and progress on the project.

02

Project Control

The plan for the project will be developed with the full participation of the Project team. The plan will represent the agreed best approach to accomplish the project's time and budget activities. The Project team will be responsible for accomplishing its assigned scope of work and monitoring, appraising and controlling performance accordance with the plan.

03

Project Scheduler Functions

To satisfy the project's scheduling /schedule control function, working with Project Management and all engineering procurement disciplines, the project scheduler will perform and coordinate functions outlined.

”

We strictly prepare technical documents and obtain samples of the proposed materials from the approved source as per the requirements of the contract.

Those were our COMPANY HIGHLIGHTS

Rest assured..

At Al Ayaan, we promote quality driven employees who contribute to their fullest potential and be an integral to the company's progress and deliver great value to our clients. We have a dedicated team of highly qualified and experienced MEP/Civil/General/Fitout specialists reinforcing the company's reputation as a quality-driven and results-oriented services company.
